

# EQUIPMENT RECOMMENDATION – TUB COAT

General Chemical Corporation  
12336 Emerson Dr.  
Brighton, MI 48116  
248-587-5600

TUB COAT™ is a peelable polymer in an aqueous solution from General Chemical Corporation.

This product may be applied by brushing, rolling, or spraying. Best coverage and results are obtained by spraying the product. General Chemical recommends a Grayco, Magnum XR9 airless spray system utilizing a 515 spray tip. We recommend 100' of ¼" spray hose. This spray equipment is available from Home Depot and other building supply and paint wholesalers.

When electricity is not available on the job site we recommend a 2500 Watt Echo generator as manufactured by Honda equipment company. Any generator that produces 2000 Watts or more should run the sprayer.

We recommend that the installer wear a painters mask, goggles, and full protective clothing when spraying the tub or shower.
